

# Experience it!

*RobotXperience, brings innovation to life*

## Keynotes    Innovation events    Workshops

Thank you for your interest in our high-tech experiences! Our aim is to introduce people to the latest technologies. This in a surprising and accessible way.

Technology has a major impact on the future. Everyone is therefore 'curious' about the developments and the interest is often awakened when people can really experience the latest technology. It inspires them to look at the world in a different way and to reconsider opportunities.

**Inspiring to innovate, that's what we are all about!**  
**And we are happy to do so to make your event successful.**

*The following services of our robots and technology are often requested by our customers:*

## Keynote: speaker and robot on stage

We have several speakers, each with their own specialism. Randall van Poelvoorde is one of our experts in the field of Exponential Technology. He knows how to get a room enthusiastic and inspired with a keynote about the impact of technology, on people, organization and society. With great enthusiasm and concrete, real examples he talks about the possibilities, now and in the near future, that robots and other technologies offer society.

Randall van Poelvoorde is known as a permanent 'Exponential Technology' commentator (including robotics, Artificial Intelligence) at BNR Newsradio. He is also a guest lecturer on these themes at Nyenrode Business University. He has provided national and international keynotes on Exponential Technology for Rabobank, Toyota, EMC, KLM, VGZ, Bovag, Eurofiber, NN Group, among others..

*Exponential Technology Expert Randall van Poelvoorde*

### Popular themes:

- Robots & innovation trends
- Robots and technology for care and well-being
- Robots, employment and ethics
- Exponential Technology, artificial intelligence and robots
- Robots and education
- Your own theme is negotiable.

*If desired, we can provide a robot on stage as co-host of the speaker.*

*Please do inquire about our additional speakers.*

## Workshops with robots and technology

For groups up to 30-40 persons an interactive workshop is ideal. The attendees will gain a lot of knowledge and insight in a short period of time. Together, the participants draw conclusions with the workshop leader, share insights and learn from each other. By keeping groups small, networking is an additional advantage and it creates the opportunity for personal questions and developments.

Since we have several workshop leaders in house, it is possible to split the group into smaller groups for interactive workshops after a keynote. This way, the examples discussed during the keynote can be made concrete immediately.

*Robot Expert care and living Tom Ederveen*

### Popular workshop themes:

- Robots now and in the future
- Robots in healthcare
- Robots, employment and ethics
- Robots and education
- Design thinking workshops

### Inspiration, interpretation and creativity

Our workshops are designed to seamlessly fit the issues and themes of your organization. If desired, we can combine the interactive workshop with demonstrations of a robot and new technologies.

## Interviews and co-host

A humanoid robot is an absolute attraction at the plenary opening of an event or conference. For example, it can have a conversation on stage with a speaker or chairman. The dialogues are programmed in advance so that the robot can also give short speeches.

Whether the Pepper robot, 120 cm, is on stage and addresses the audience or seeks personal contact with the speakers, it has absolutely a lot of appeal and will make a good impression on everyone.

## Robots on events

Do you want to surprise visitors at your booth? A robot attracts attention, can provide visitors with information and is a great conversation starter.

## Requirements

Depending on your message, we will advise you which robot has the best result. Please note that there should be space on the booth itself where the robot can move.

Fairs are complex environments, especially when it comes to the availability of WiFi and networks. Take into account that the preparation requires time and attention.

## Availability depending on Region

The availability of robots for trade fairs is highly dependent on the region in which the fair takes place. For trade fairs we work together with partners. For example in America and Germany, but our network is still expanding.

## Strength of our organization

**Message:** The message of your event is reinforced by the combination of the aforementioned possibilities. For example, by a robot asking questions during an interview on stage followed by a keynote with a summary and future image. Afterwards you can use the most modern technologies during your event, which will maximize the desired effect. We would like to contribute ideas about your concept and how we can best use our robots and technology for this.

**Collaboration:** Over the past 3 years, we have provided more than 500 events. Our organization is well aware of the ins and outs that are needed to contribute to the successful deployment of robots. As a partner, we support you step by step in the realization of your project..

**Highly educated robot professionals:** For a technology event it is important to use professionals with an understanding of the business. We offer highly experienced, highly educated and representative employees who can have a substantive conversation at all levels.
